Still have questions about **BOTOX® for Chronic Migraine**?

**Indication**

*BOTOX®* is a prescription medicine that is injected to prevent headaches in adults with Chronic Migraine who have

**IMPORTANT SAFETY INFORMATION**

**BOTOX®** may cause serious side effects that can be life threatening. Get medical help right away if you have any of these problems any time (hours to weeks) after injection of **BOTOX®**:

- Problems swallowing, speaking, or breathing, due to weakening of associated muscles, can be severe and result in loss of life. You are at the highest risk if these problems are pre-existing before injection. Swallowing problems may last for several months.

- Spread of toxin effects. The effect of botulinum toxin may affect areas away from the injection site and cause serious symptoms including loss of strength and/or balance, drooping eyelids, hoarseness or change or loss of voice, trouble saying words clearly, loss of bladder control, trouble breathing, and trouble swallowing.

Please see additional Important Safety Information on the back.

**What makes BOTOX® for Chronic Migraine a different treatment option?**

**BOTOX®** is a preventive treatment that prevents headaches and migraines before they even start. It is injected by your doctor into 7 head/neck muscle areas.

It has been proven for nearly 10 years, with 3.3 million treatments given to over 500,000 people with Chronic Migraine since FDA approval in 2010. **BOTOX®** is the first FDA-approved preventive Chronic Migraine treatment and is given by your doctor 4 times a year.

**What can I expect from BOTOX®?**

**BOTOX®** prevents on average 8 to 9 headache days and migraine/probable migraine days per month (vs 6 to 7 for placebo) before they even start.

**What should I know about the possible side effects of BOTOX®?**

The most common side effects for **BOTOX®** were neck pain, experienced by 9% of patients (vs 3% for placebo) and headache, experienced by 5% of patients (vs 3% for placebo).

**Is BOTOX® covered by insurance?**

**BOTOX®** is covered in 98% of commercial insurance plans and 100% for Medicare.

**Tell your doctor about your medical conditions, including if you: have or have had bleeding problems; have plans to have surgery; had surgery on your face; weakness of forehead muscles; trouble raising your eyebrows; drooping eyelids; any other abnormal facial change; are pregnant or plan to become pregnant (it is not known if **BOTOX®** can harm your unborn baby); are breastfeeding or plan to (it is not known if **BOTOX®** passes into breast milk).**

**For more information refer to the Medication Guide or talk with your doctor.**

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call 1-800-FDA-1088.
Summary of Information about BOTOX® (onabotulinumtoxinA)

What is the most important information I should know about BOTOX®?

BOTOX® may cause serious side effects that can be life-threatening. Call your doctor or get medical help right away if you have any of these problems any time (hours to weeks) after injection of BOTOX®:

- Problems swallowing, speaking, or breathing, due to weakening of associated muscles, can be severe and result in loss of life. You are at the highest risk if these problems are pre-existing before injection. Swallowing problems may last for several months
- Spread of toxin effects. The effect of botulinum toxin may affect areas away from the injection site and cause serious symptoms including: loss of strength and all-over muscle weakness, double vision, blurred vision and drooping eyelids, hoarseness or change or loss of voice, trouble saying words clearly, loss of bladder control, trouble breathing, and trouble swallowing

There has not been a confirmed serious case of spread of toxin effect away from the injection site when BOTOX® has been used at the recommended dose to treat Chronic Migraine.

BOTOX® may cause loss of strength or general muscle weakness, vision problems, or dizziness within hours to weeks of taking BOTOX®. If this happens, do not drive a car, operate machinery, or do other dangerous activities.

BOTOX® dosing units are not the same as, or comparable to, any other botulinum toxin product.

What is BOTOX®?

BOTOX® is prescription medicine a medical professional injects into muscles to prevent headaches in adults with Chronic Migraine who have 15 or more days each month with headache lasting 4 or more hours each day in people 18 years and older.

It is not known whether BOTOX® is safe or effective to prevent headaches in people with migraine who have 14 or fewer headache days each month (episodic migraine).

Who should not receive BOTOX®?

Do not receive BOTOX® if you are allergic to any of the ingredients in BOTOX® such as botulinum toxin type A and human serum albumin; had an allergic reaction to another botulinum toxin product such as Myobloc®, Dysport® (abobotulinumtoxinA), or Xeomin® (incobotulinumtoxinA); or have a skin infection at the planned injection site.

What should I tell my doctor before treatment?

Tell your doctor about all your muscle or nerve conditions, such as amyotrophic lateral sclerosis (Lou Gehrig’s disease), myasthenia gravis, or Lambert-Eaton syndrome, as you may be at increased risk of serious side effects.

Tell your doctor if you have or have had breathing problems such as asthma or emphysema; swallowing problems; bleeding issues; plan to or have had surgery; have forehead muscle weakness such as trouble raising your eyebrows; drooping eyelids; or any changes to your face.

Tell your doctor if you are pregnant; plan to become pregnant; are breastfeeding or plan to breastfeed. It is not known if BOTOX® (onabotulinumtoxinA) can harm your unborn baby or if BOTOX® passes into breast milk.

What are common side effects?

The most common side effects include neck pain; headache; migraine; slight or partial facial paralysis; drooping eyebrows; eyelid drooping; bronchitis; muscle or joint aches; weakness; dizziness; double vision; and drooping or swelling in the eyelids, forehead, or neck. These can occur any time (hours to weeks) after injection of BOTOX® due to weakening of associated muscles.

The most common side effects of BOTOX® include:

- Neck pain
- Headache
- Migraine
- Slight or partial facial swelling
- Drooping or swelling of the eyelids
- Weakness
- Dizziness
- Double vision
- Facial swelling

Some side effects are pre-existing before injection. Swallowing problems may last for several months.

Other side effects that have been reported include:

- Neck pain
- Headache
- Migraine
- Slight or partial facial paralysis
- Drooping eyelids
- Weakness
- Dizziness
- Double vision
- Facial swelling

These are not all of the possible side effects. Call your doctor for medical advice if you experience any side effects after treatment with BOTOX®.

What should I tell my doctor about medicines and vitamins I take?

Using BOTOX® with certain other medicines may cause serious side effects. Do not start any new medicines until you have told your doctor that you have received BOTOX® in the past. Tell your doctor if you have received an injection with another botulinum toxin product in the last 4 months, such as Myobloc®, Dysport®, or Xeomin®.

Tell your doctor about all prescription and over-the-counter medicines, vitamins and herbal supplements you take; recent antibiotic injections; anticholinergics; muscle relaxants; allergy or cold medicine; sleep medicine; aspirin-like products; and blood thinners. Ask your doctor if you are not sure whether your medicine is listed above.
